SUMMARY

Senior Backend Engineer with 7+ years of experience building scalable backend systems for billing, payments, and subscription platforms. Strong experience in Java, Spring Boot, Kafka, and distributed systems with a focus on reliability, performance, and clean architecture. Worked on multi-tenant SaaS platforms, prepaid card systems, and event-driven workflows. Experienced in system design, production support, mentoring, and backend performance optimization.

SKILLS

- **Languages:** Java, JavaScript, TypeScript, SQL, Swift
- **Backend:** Spring Boot, Spring MVC, Hibernate, JPA, REST APIs, GraphQL, Microservices
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis
- **Messaging:** Apache Kafka, RabbitMQ
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Jenkins, GitHub Actions
- **Testing:** JUnit, Mockito, Integration Testing
- **Monitoring:** Datadog, Distributed Tracing, Centralized Logging
- **Concepts:** Distributed Systems, Event-Driven Architecture, System Design, Scalability, Performance Optimization

WORK EXPERIENCE

AppDirect

Senior Software Engineer

Pune, India

April 2022 – Present

- Design and maintain Java and Spring Boot microservices for a multi-tenant billing and subscription platform serving thousands of marketplace tenants.
- Migrated billing and payment workflows from RabbitMQ to Apache Kafka handling millions of events per day, improving scalability, replayability, and operational reliability.
- Redesigned the subscription processing pipeline by replacing repeated per-order database lookups with subscription-level data loading and in-memory Map-based processing, reducing database load by nearly 99% and resolving timeout issues for large subscriptions.
- Developed GraphQL and Kafka-based services for minimum-spend contract enforcement, including monthly scheduled jobs that aggregate partner spend, validate contract thresholds, and automatically charge remaining balances when commitments were not met.
- Optimized a high-latency tenant API by fixing inefficient MySQL index ordering that was causing full table scans, reducing response time from 40 seconds to 2 seconds.
- Improved backend performance through JVM tuning, SQL optimization, and distributed tracing, reducing P99 latency by around 35%.
- Contribute to code reviews, production support, incident response, and mentoring engineers across backend platform teams.

Paycraft Solutions

Senior Software Engineer

Bengaluru, India

Nov 2021 – April 2022

- Developed Java and Spring Boot microservices for prepaid card systems used by ICICI and HDFC Bank, supporting millions of billing and payment events per day.
- Built a reusable logging library adopted across 10+ services to standardize API request and response logging for transaction debugging and tracing.
- Improved backend performance using SQL optimization, indexing, and connection pool tuning, reducing average issue resolution time by nearly 30%.
- Maintained 80%+ unit and integration test coverage using JUnit and Mockito.

AppDirect

Software Engineer

Pune, India

March 2019 – Nov 2021

- Worked on migration of Jaguar Land Rover connected-car backend services from a legacy CMS platform to AppDirect infrastructure across 4 regions including UK, US, China, and Europe.
- Managed operational handover and support ownership of 80+ Java and Node.js microservices from the Calgary team to Pune.
- Built a bulk cryptographic signing service for secure OTA delivery workflows, reducing onboarding time for new product versions by around 40%.
- Integrated third-party APIs including Reuters, CNN, and AccuWeather into in-vehicle infotainment systems.

PROJECTS

Distributed Task Scheduler

[Link](#)

Tech: Java, Spring Boot, PostgreSQL, Redis, Kafka

- Built a distributed job scheduling system supporting recurring and one-time task execution across multiple instances.
- Designed Redis Sorted Set based scheduling with Kafka consumer groups for scalable task processing and duplicate prevention.
- Implemented retry handling, worker recovery, and failure recovery mechanisms for reliable execution.

SpiceMoney – Merchant Reward & Loyalty Engine

Tech: Java, Spring Boot, Kafka, Docker

- Built Kafka-based backend services for merchant reward and milestone tracking workflows.
- Implemented QR validation and fraud prevention logic for merchant offers and reward distribution.
- Developed APIs for bulk QR generation and printable PDF generation.

MediaSync for iOS – Wi-Fi Media Server & Viewer

[Link](#)

Tech: Swift, SwiftUI, Vapor, WebSocket

- Built a local media streaming application allowing secure photo and video sharing over Wi-Fi.
- Developed backend services using Swift and Vapor with WebSocket-based real-time communication.
- Implemented lazy loading and infinite scrolling for large media libraries.

EDUCATION

Sunbeam Institute of Information Technology

Pune, Maharashtra

PG Diploma in Advance Computing

2018 – 2019

Government Engineering College

Raipur, Chhattisgarh

Bachelor of Engineering in Computer Science

2014 – 2018
